

**Rajeev Malhotra** was born in Kalpa (Himachal Pradesh). He is Economic Adviser to Union Finance Minister, Government of India. He has published widely on issues related to poverty estimation, human development, human rights, and the Indian economy. He is the lead author of the first National Human Development Report, Planning Commission (OUP 2002).

'This is an impressive book, covering the globe and the grassroots, and notable for its comprehensiveness, depth, and contemporary relevance. It gives a new perspective to a number of old topics, ranging from labour reforms, competition law, and climate change policy, to subsidy delivery systems and the development of infrastructure.

It presents the latest ideas concerning more effective policymaking and disseminates to the larger reading public the achievements, failures, prospects, and problems that confront India during this critical phase.'

## a *Policies for India's Development* critical decade

As globalized India plays a bigger role in the international arena and undergoes rapid economic transformation, the impact of international developments and the quality of its policymaking responses come into sharp focus. In this volume, economists and advisers from various central ministries, regulatory bodies, and policy think-tanks provide a first-hand account of policymaking in these critical times.

Promoting evidence-based economic policymaking, the volume presents a nuanced analysis of key challenges facing the economy, including those related to:

- carrying forward reforms from the centre to the state and sub-state levels for harmonizing economic policies at different levels;
- regulation and oversight capacities for the private sector in critical activities that impact country's development prospects; and
- redesigning incentive structures and public delivery mechanisms to improve the quality of governance.

As the Twelfth Plan (2012–17) takes final form, this book highlights issues for the next level of reforms in this critical decade. Topical, engaging, and relevant, it will interest students, academics, policymakers, journalists, and general readers.
